Exhibit A

Marked Up Version of Amended Claims-U.S. Patent Application Ser. No. 09/750,456

1(amended). A genetically engineered mammalian cell that has been mutated by a process comprising the insertion of a recombinantly manipulated polynucleotide sequence into a gene in said genetically engineered mammalian cell wherein said gene is identifiable as corresponding to [at least one of] SEQ ID NO[S]: 393 [1-416].

- 2. The genetically engineered mammalian cell of Claim 1, wherein said cell is murine.
- 3. A cell according to Claim 2, wherein said cell is an embryonic stem cell.
- 4. The genetically engineered mammalian cell of Claim 1, wherein said polynucleotide sequence is present on a viral vector.
 - 5. A cell according to Claim 4, wherein said viral vector is a retroviral vector.
- 6. A cell according to Claim 4, wherein said viral vector additionally comprises regions of targeting DNA that facilitate gene targeting by homologous recombination.

7 (amended). An isolated murine embryonic stem cell line comprising an engineered retroviral gene trap vector in at least one gene comprising a polynucleotide sequence identifiable as <u>encoding</u> [corresponding to any one of] SEQ ID NO[S]: <u>393</u> [1-416].

Exhibit B

Clean Version of The Pending Claims-U.S. Patent Application Ser. No. 09/750,456

- 1. A genetically engineered mammalian cell that has been mutated by a process comprising the insertion of a recombinantly manipulated polynucleotide sequence into a gene in said genetically engineered mammalian cell wherein said gene is identifiable as corresponding to SEQ ID NO:5.
 - 2. The genetically engineered mammalian cell of Claim 1, wherein said cell is murine.
 - 3. A cell according to Claim 2, wherein said cell is an embryonic stem cell.
- 4. The genetically engineered mammalian cell of Claim 1, wherein said polynucleotide sequence is present on a viral vector.
 - 5. A cell according to Claim 4, wherein said viral vector is a retroviral vector.
- 6. A cell according to Claim 4, wherein said viral vector additionally comprises regions of targeting DNA that facilitate gene targeting by homologous recombination.
- 7. An isolated murine embryonic stem cell line comprising an engineered retroviral gene trap vector in at least one gene comprising a polynucleotide sequence identifiable as encoding SEQ ID NO:5.
